
bounded logical space $W_i = (C_i$: vegetables, R_i: has_part)
leaf
root
stem
door
lettuce
spinach
carrot
celery
$\odot$
=
S_i (sense)
V_i (truth)
$W_i = V_i \odot S_i$
Sinnvoll (admissible cross)
Unsinnig (structurally impossible)
asserted fact (V_i)
queryable fact (W_i)
nonsense: not representable
grid: logical space $L_i(C_i, R_i)$ — the semantic index assigns
each symbol its integer coordinate on axis a (objects) or b (parts)
